

Tekitizy Carousel v1.0.0

A jQuery Carousel to rule them all !

Tested on IE9, IE10, Chrome, Safari, Firefox, iPhone, iPad, Chrome on Google Nexus.

Collaborators

- David Maarek (<http://davidmaarek.fr/>)
- Mathieu Rodrigues (<http://mathieurodrigues.com/>)

Features

- Adaptive
- Fully Customizable
- Legend from ALT attribute
- Choose the time of each items to be displayed
- Slide Effect
- Customizable controls
 - Display / Hide Next and Prev button
 - Display / Hide Play and Pause button
 - Allow / Disallow Autoplay
 - Navigation with Thumbnails

Upcoming features

- CSS3 3D Transitions
- Mouse Slide Events
- Keyboards controls

Demos

See what Tekitizy can do:

- Complete (<http://mathieurodrigues.com/tekitizy-example/complete.html>)

Requirements (for install)

- NodeJS (<https://nodejs.org/en/>)
- NPM (<https://www.npmjs.com/>)

- Bower (<https://bower.io/>)

Requirements (for Tekitizy)

- jQuery 3.1.1+ (<https://jquery.com/>)
- Font-Awesome 4.7+ (<http://fontawesome.io/>)

See next step to download automatically dependancies.

1. Getting Started

Check if you have NodeJS on your computer. If not, install it easily here (<https://nodejs.org/en/>) .

Download the archive of the Tekitizy Carousel on your computer, then open terminal or powershell in the root directory of the project and paste those commands:

```
npm install -g bower
```

```
bower install
```

2. Set up your HTML

Load jQuery and include Font-Awesome and Tekitizy Carousel on your HTML file

```
<!-- Include js plugin -->
<script src="./js/tekitizy.js"></script>

<!-- Include dependencies -->
<script src="./bower_components/jquery/dist/jquery.js"></script>
<link rel="stylesheet" href="./bower_components/font-awesome/css/font-awesome.css"
">

<!-- Basic stylesheet -->
<link rel="stylesheet" href="./css/tekitizy.css" >
```

See the example on archive.

3. Call the plugin

All you need is to choose a class (a wrapper) on your HTML to allow the Tekitizy Carousel to crawl image on it and replace .post on this example.

The third parameter is optional, but here are defaults value.

```
<script>
Tekitizy.setup(jQuery, '.post img', {
  prevNext: 'true', // Display (true) or Hide (false) Prev and Next button
  play: 'true', // Display (true) or Hide (false) Play and Pause button
```

```
    autoPlay: 'true', // Play (true) or Pause (false) when init Tekitizy Carousel
    imageDuration: 2, // Choose the time of each items to be displayed (in seconds)
    effect: 'true', // Enable or Disable 'Slide Effect' (Opacity 0 to 1 if disabled)
    thumbnails: 'true' // Display (true) or Hide (false) the Navigation with Thumbnail
  }
</script>
```

Now call the Tekitizy initializer function before `</body>` and your carousel is ready.

Enjoy 😊
